

Study Material: Learning Basics

1. Effective Study Techniques

- Use active recall: close notes and test yourself.
- Use spaced repetition: review after 1 day, 3 days, 7 days.
- Study in focused 25-minute sessions.
- Teach concepts aloud in simple language.

2. Mathematics Quick Notes

- Percent = $(\text{part} / \text{whole}) \times 100$
- Simple Interest = $(P \times R \times T) / 100$
- Average = Sum of values / Number of values
- Linear equation example: $y = mx + c$

3. Python Basics

- Variable stores data: `x = 5`
- List example: `nums = [1,2,3]`
- Loop: `for n in nums: print(n)`
- Function: `def add(a,b): return a+b`

4. Exam Strategy

- Read all questions first.
- Answer easy questions first.
- Keep last 10 minutes for review.
- Stay calm and manage time.

Good luck with your studies!
